the boreal forest is one of the world s great ecosystems stretching across north america and eurasia in an unbroken band and containing about 25 of the world s closed canopy forests the kluane boreal forest ecosystem project was a 10 year study by nine of canada s leading ecologists to unravel the impact of the snowshoe hare cycle on the plants and the other vertebrate species in the boreal forest in much of the boreal forest the snowshoe hare acts as a keystone herbivore fluctuating in 9 10 year cycles and dragging along secondary cycles in predators such as lynx and great horned owls by manipulating the ecosystem on a large scale from the bottom via fertilizer additions and from the top by predator exclosures they have traced the plant herbivore relationships and the predator prey relationships in this ecosystem to try to answer the question of what drives small mammal population cycles this study is unique in being large scale and experimental on a relatively simple ecosystem with the overall goal of defining what determines community structure in the boreal forest ecosystem dynamics of the boreal forest the kluane project summarizes these findings weaving new discoveries of the role of herbivores turned predators compensatory plant growth and predators eating predators with an ecological story rich in details and clear in its findings of a community where predation plays a key role in determining the fate of individuals and populations the study of the kluane boreal forest raises key questions about the scale of conservation required for boreal forest communities and the many mammals and birds that live there

this volume provides a selection of the most significant papers presented at the second conference on fish telemetry in europe in la rochelle france in april 1997 the conference was attended by 100 scientists from 18 countries the contributions are grouped under the following headings methodology and new developments tagging procedures behavioural and physiological ecology fish migration stock management and conservation particular emphasis was put on tag miniaturisation multiple functions and sampling strategies papers concerned the effects of tags on fish for consolidating behavioural or original physiological investigations noticeably more open to the marine environment methods were essentially applied to study the relationships between fish and their natural environment besides providing up to date information on the state of fish telemetry the book illustrates the increase in spatial and temporal scales and the number of tracked fish which gives a statistical basis for field study in behavioural ecology
